

PRESS RELEASE

Edison launches a new e-Mobility app and platform with Landis+Gyr OCEAN EV Charging Software

Milan, Italy – December 17, 2024 - Edison - a leading energy company, with over 140 years of history and records that make it the oldest operator in the sector in Europe - launches a new e-Mobility app and platform with Landis+Gyr OCEAN EV Charging Software, which provides access to more than 30,000 charging stations from Edison and other major operators in Italy.

Edison thus improves the user experience: drivers will be able to plan trips with charging points always at hand and will have an intuitive and functional app.

Edison aims to achieve an 8% market share in the supply of electricity used for recharging electric vehicles and to install over 100,000 charging points (cumulative), including innovative solutions such as smart charging and V2G (Vehicle-to-Grid).

“The collaboration with Landis+Gyr gives us the opportunity to rely on a competitive and specialized product, that will constantly evolve following the dynamic and developing market we’re operating in. We chose a product capable of managing e-Mobility activities and services dedicated to both residential and commercial or public customers”, says **Davide Dotti**, Business Innovation Director of Edison.

“By adopting a single software platform, we are able to offer different customer segments personalized experiences based on their needs, so as to constantly improve the use of e-Mobility services. With Landis+Gyr and our Italian partner we have built a very scalable and flexible architecture, that allows us to reduce the time-to-market of bids and initiatives and ensure high service levels. Also through these technology solutions, Edison affirms its commitment to driving transformation in the Energy Market according to our Sustainability and Strategic Plan” says **Antonella Periti**, Chief Information Officer of Edison

“We are proud to partner with Edison and support them in enhancing and expanding their EV charging services,” said **Matevž Mencin**, Senior Key Account Manager at Landis+Gyr EV Solutions. *“Customer satisfaction and user experience are the main pillars of our business cooperations. With this in mind, we look forward to seeing Edison gain a better overview and control of their charging network through OCEAN, while their users enjoy a seamless interface.”*

In e-Mobility, Edison operates through two companies: Edison Energia, which is active in the sale of electricity and gas to households and businesses and provides value-added services to the retail market, will offer the new app to end customers; Edison Next, besides accompanying companies and territories on their path to decarbonisation and ecological transition, will use the platform to manage charging infrastructures.

About Edison

Edison is a leading energy company, with 140 years of history and records that make it the oldest operator in the sector in Europe. The company employs more than 5,500 people, operating in Italy and Europe in renewable and low-carbon production, natural gas procurement and sales, sustainable mobility, and through Edison Energia and Edison Next in energy, environmental and value-added services for customers, businesses, territories and public administration. The Group is at the forefront of the energy transition challenge, consistent with the UN Sustainable Development Goals and European decarbonization policies. Edison has a highly flexible and efficient power generation fleet, consisting of more than 250 power plants including hydroelectric, wind, solar, and high-efficiency gas-fired combined-cycle thermoelectric plants with a total capacity of about 7.2 GW; and meets the country's LNG and natural gas supply, thanks to a large and highly diversified portfolio of 13 billion cubic meters per year.

About Landis+Gyr

Landis+Gyr is a leading global provider of integrated energy management solutions. We measure and analyze energy utilization to generate empowering analytics for smart grid and infrastructure management, enabling utilities and consumers to reduce energy consumption. Our innovative and proven portfolio of software, services and intelligent sensor technology is a key driver to decarbonize the grid. Having avoided more than 8.9 million tons of CO₂ in FY 2023, Landis+Gyr manages energy better – since 1896. With sales of USD 1.96 billion in FY 2023, Landis+Gyr employs around 6,900 talented people across five continents. For more information, please visit our website www.landisgyr.com.
